

FIMA Products for the chemicals and pharmaceuticals industry
Good products – good discussions

The engineering company from Oberfischach is represented at the Achema with two stands, and with ventilators, condensers and centrifuge dryers. The air condensers are used in the chemicals and petrochemicals industry. “The orders received over the last twelve months for these systems have exceeded expectations,” says Stephan Jakob, Managing Director.

With its associate company Heinkel in Bietigheim-Bissingen, the Obersontheim company intends to continually develop centrifuge technology. It presented the latest developments at the trade fair. “We held some good discussions and advised on potential joint projects with our partners,” says Achim Schaile with satisfaction.
